How Do I Protect Myself On The Internet?

Introduction

Internet is the vast connection of computers/devices around the world to work and share resources, data and formation.

As the usability of **internet** increase over time, there is a great worm affecting the use of **internet**, individuals face several challenges which are caused by certain individual that use the internet to gain others' sensitive information and leave others in broken heart.

In this pdf, your're going to explore the challenges you're facing as **internet** user, and you will learn how to protect your sensitive information from being taken away by **internet** predators.

Who is hacker and Scammer?

Hacker is an individual who steps into an organization's, personal, and company's information to gain full access to it. It can be anyone online trying to send you message/email and get your privacy.

A Scammer is someone who decieves people to steals money, personal information, or valuable information. They use lies, tricks, and manipulative tactics to make the victim trust them and make them take advantage.

Common Types of Scammers

- ✓ **Online scammers:** fake links, hacked account, romance scams, fake investment links.

- ✓ **Phone scammers:** pretending to be from banks, police, or companies.
- ✓ **Email scammers:** sending phishing emails asking you to verify your account.
- ✓ **Social media scammers:** fake pages, fake giveaways, impersonating someone.

How do i identify hacker and Scammer?

Hackers can not be easily detected, they use their own private IP Address, DNS, and strong encryption, but you can try to identify them.

Here are several ways to identify the hackers:

1. **Unkown message/email coming from unknown location and try to ask for conversation:**

You can not just ignore the message/email, response them no matter, but after your conversation goes deeply, they can ask you for your basic details, such as password, username and stuffs. that is where you can begin to realize that the sender is not normal person who just need your conversation, when it happen like that ignore it you will be soon hunted.

2. **State Sponsored group targeting organizations in other countries:**

A state-sponsored group is a government-funded hacking organization (APT) that targets foreign institutions conduct espionage, sabotage, or cyber warfare. Governments use these groups to: Steal sensitive information (espionage) Disrupt enemy systems Influence politics (cyber warfare) Gain economic advantage Attack rival nations secretly You need to know this kind of group maybe you may get a chance to protect your nation from this kinda hacking group.

3. Hacker group that target companies to make them pay ransom:

These are the groups that hack and break down the companies's system and later force the companies to pay the ransome(money) in the form of cryptocurrency to realease the system. Such kind of attack heavily take place now aday.

4. Scammers in disguise of schalarship funding:

Hackers/scammers make their way easy to get people's belongings in many ways; they develop many platform that deceive people in the form of scholarships. After application, they ask for payment to continue education abroad or online, as big percentage of the world is in need of education and traveling aboard, they capture people's attention this way. When individuals pay up for schalarship tuitions, they disappear.

5. Hackers in the uniform of Humaniterian promotion:

Hackers attack individual in the the form of humaniterian promotion, they invoke certain individual claiming that certain individual win something great such as money, properties, or traveling form , after individual's confirmation, they require funds to secure the promotion, when individual agree to pay something up to receive his/her promised money, immediately they commence to disappear.You can identify them this way.

6. Hacker sending malicious link through social media platforms:

Hackers send malicious link that require individual to click and deceieve individuals that they're gonna get suitable resources after visiting, when certain individuals agree, the link can either damage their devices such as computers, mobile phones or loss their accounts permanently and they can not get such hacker for life. Take care what link and whom you trust on social media.

7. Social media gangs related to hackers:

One and the most important thing i want my people to know is, internet came with negative and positive impacts, negatively internet offers vast negative challenges, hackers develop business platform which enable innocent internet users to invest and gain funds with low cost, at fist session, individual gain funds , happily, they invest in large number and with large amount of money thinking they will be able to recieve another huge amount of funds in return, yet the frauder companies fail to give back the money to investors.

They appear in image of well known and legal companies, such as Amazon, Alibaba and many more to steal people's trust then people invest without single doubt. To be honest nothing is gurranted(free) in this world, everything cost, if something free come your way on internet, walk away, unless you're sure about what you're doing.

How do I protect myself from hackers and scammers?

As I have walked you on who the hacker is and how to identify such kinda indivuals.

I want you too to know how to protect yourself from being hacked.

Below are the simple way you can use to face any hacker attempts/attacks.

Know the purpose of shared links before you take your next step as this result in great damage.

-
- ✓ Do not make payment online unless it's legally verified by your local online authority.
 - ✓ Do not invest with any company which you have no idea about where it based and come from, invest smartly if you try.

- ✓ Never Click Suspicious Links
- Scammers often send:

“There is a photo of you on this website”

“Your account will be deleted—click now”

“Fake login pages”

If the link looks strange, DON'T CLICK.

- ✓ Enable Two-Factor Authentication (2FA)

Turn on 2FA on:

- Facebook
- Tiktok
- Instagram
- Gmail
- Telegram and etc.

Even if hackers get your password, they **cannot log in without the code.**

- ✓ Use Strong Passwords

Use strong password like **thep@#2002#**

- ✓ Don't Share Codes or Passwords

If a friend sends a strange message:

“Is this you in this video?”

“Send me money urgently”

Their account might be **hacked**.

Call them or message them on another platform to confirm.

✓ Secure Your Phone

♥ Keep your phone updated

♥ Avoid installing unknown apps

♥ Use fingerprint or Pin

✓ Use Privacy Setting

On social media

♥ Set your profile to private

♥ Hide your phone number and email

♥ Do not display too much personal information

✓ Beware of “Too Good to Be True” Offers

Examples

“You won \$5,000”

“I can make you Rich in one week” men nothing is free I’m telling you.

“I will double your money” if the message seems like coming from bank.

“Fake job openings asking for money”

If it sounds too sweet → **It’s a scam.**

✓ Keep Backups

If a hacker locks your device or deletes your files, you can restore from backup.

✓ Trust Your Instinct

If something feels strange or uncomfortable—**stop immediately**.

Why this script is important?

This script teach you how you gotta protect yourself from being hunted by hackers and scammers, It alert you that keep your head up to protect your sensitive information from being hacked or scammed.

How to restore hacked account and how to set 2-Factor Authentication Example explained.

I will use facebook to demonstrate it.

Type this **yourself** in the browser (don't click random links):

facebook.com/hacked

Choose “Someone else accessed my account”.

STEP 2: Find Your Account

Enter your **email, phone number, or username**

Select your profile when it appears

If your email/phone was changed by the hacker, click:
“No longer have access to these?”

STEP 3: Verify Your Identity

Facebook may ask you to:

Confirm recent activity

Upload a **clear photo of your ID** (passport, national ID, or driver’s license)

This is normal and safe **only on Facebook’s official page.**

STEP 4: Create a NEW Password

Use a password you’ve **never used before**

Make it long and strong

Example:

ThEp#FB_2025@Safe

STEP 5: Secure Your Account (VERY IMPORTANT)

After login:

✔ **Turn on 2-Factor Authentication**

[Settings](#) → [Security](#) → [Two-Factor Authentication](#)

✔ **Remove Unknown Devices**

[Settings](#) → [Security](#) → [Where you're logged in](#) → [Log out of all sessions](#)

✔ **Check & Fix:**

Email address

Phone number

Linked accounts

Recent posts/messages

Delete anything you didn't do.

STEP 6: Secure Your Email

If your email is hacked, Facebook will be hacked again.

Change email password

Enable 2FA on email

Check recovery email & phone

STEP 7: Scan Your Phone / PC

Remove suspicious apps

Scan for malware

Update system and browser

✗ DO NOT DO THESE

Don't pay anyone claiming they can recover your account

Don't give OTP or verification codes

Don't trust "Facebook support" messages on Messenger or WhatsApp

If Facebook Says "We Can't Confirm It's You"

Try again after **24–48 hours**

Use **another device** you logged in before

Use the **same location & internet** if possible

END
